any IgE sensitization

non-IgE (n = 233, 65 edges)

IgE-sensitized (n = 275, 62 edges)

Differential network (1 edge at q < 0.05)

Node:
- genus
- core genus (prevalence ≥ 80%)

Edge:
- positive association
- negative association

Phylum:
- Firmicutes
- Bacteroidota
- Actinobacteriota
- Proteobacteria
- Verrucomicrobiota

Differential edge, non-IgE → IgE (nominal p < 0.05):
- \+ → 0 (positive in non-IgE only)
- 0 → + (positive in IgE only)
- − → 0 (negative in non-IgE only)
- 0 → − (negative in IgE only)
- \+ → + (strength changed)
- significant, q < 0.05 (Benjamini–Hochberg)
